

JetTrac DBConnect

Database Access for Adobe Central Output Server

JetTrac DBConnect gives Adobe Central Output Server the power it needs to access databases. With DBConnect, Central users can integrate database information into any job they output. With JetTrac DBConnect users can call database fields and even key information from multiple tables into a single form. DBConnect runs with Adobe

Central on Windows, Unix, Linux, and AS/400 (with PASE) and works with any ODBC database.

Key Features

Rapid and Easy Installation

Allows for quick implementation and access of database tables.

User Friendly Interface

Has an intuitive interface that is easy to use and maintain.

Highly Compatible

Seamlessly integrates into Adobe Central Output Server for access to a wide range of databases

Versatile Access

Allows users to link across tables within a database to obtain the information they desire

Multiple Platforms

Works on Windows, Unix, and AS/400.

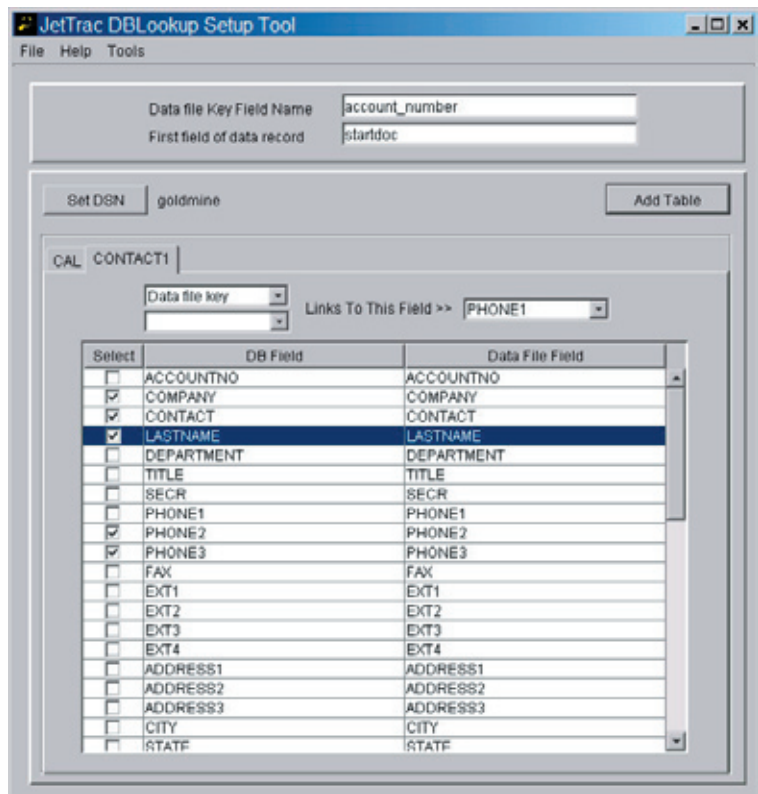

Highly Flexible

JetTrac DBConnect is designed to work with any ODBC compliant database and on any platform that supports Java.

Easy Setup Tools

Included is a graphical setup tool that allows very easy setup of database specific information from multiple tables all in the same job.

The installation and configuration of this system is designed to be accomplished simply and quickly. Training is available from ProTechnology, if you would like to learn how to create new forms.

Adobe Central Output Server

Adobe® Central Pro Output Server allows organizations to create personalized, customer-facing documents from any data source. Output Server dynamically generates electronic documents such as purchase orders, invoices, statements, and checks for delivery via Adobe Portable Document Format (PDF), the Web, e-mail, fax, or print. With Central Pro Output Server, businesses can provide their customers or partners with a more personalized user experience, upsell new products and services, and target advertising to specific customers more efficiently and cost-effectively than ever before.

How it Works

Data from legacy, line-of-business, ERP, or CRM applications is merged with an electronic document template using a powerful processing engine. Output Server supports many aspects of document output from high-volume distributed printing to Adobe PDF generation for Web delivery, and offers multiple language and platform support.
