

JetTrac Fax

Cost Efficient Fax integration for
Adobe Central

JetTrac Fax was developed to address the needs of clients who have medium to low production faxing requirements. With JetTrac Fax you do not need a costly fax server. JetTrac Fax provides the communication between Adobe Central and the built-in Windows Fax Service to automate the faxing of production documents produced by Adobe Central. It allows sending a number of faxes very quickly from a batch within Central to the Windows Fax Service which then queues them up and manages sending them one at a time.

JetTrac Fax is an optional component of JetTrac OutputDirector and the setup is automated within the Fax tab of OutputDirector in order to select the information needed to send the fax like the To Fax Number, From and To Company Name, cover page information, etc.

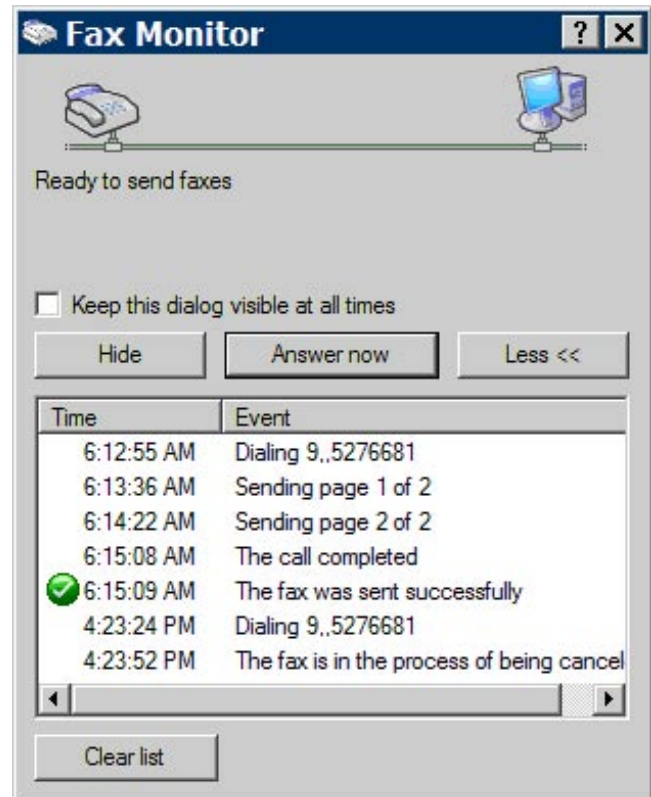

JetTrac Fax is also available as a separate module from JetTrac OutputDirector and can be run from a step in a production Adobe Central job.

Features and benefits

- Inexpensive fax solution
- No need to acquire an additional expensive fax server
- Easy to set up and administer
- Low training needs
- Works within your existing environment
- Integrates seamlessly with Adobe Central and JetTrac OutputDirector

System Requirements

Windows XP, Windows 2000, Windows 2003
Java Runtime Environment

JetTrac Fax uses the Windows Fax Service to provide a cost efficient solution
